

itm End-of-Day Process Automation

What You Get

- An **itm** EOD automation tool for setup for automation
- The ability to toggle between jobs that have been setup and those that need to be setup
- Parameter lists for all the jobs that can prompt for a response
- The ability to automate some or all your **itm** EOD jobs
- Robot Scheduler for the setup of date and time, event driven schedules with alerting capability for error processing

Reduce Costs & Operator Error with Automation

Automate! Remove the need for operator attended processing when executing your **itm** end-of-day (EOD) processes. Create default responses for prompts that would typically require operator input. Have every job in your **itm** procedure control setup run without the need for input.

Integrate the EOD processing with the HelpSystems Robot Scheduler to add an extra level of scheduling and monitoring of your **itm** EOD processing, allowing detailed monitoring of the **itm** jobs, intricate scheduling steps, and history of all EOD job execution history.

Kick off your **itm** EOD processing automatically while reducing cost, operator errors, and improving efficiency.

Services

Implementation services are required from Euronet and HelpSystems. Additional services may be required for **itm** releases prior to 4.8.

Contact your Euronet Sales or Account Manager for more information.
