Quick, Convenient & Secure Payments

Your organization's path to digitization must include your payment cards – essentially creating a digital wallet for your cardholders. Not only will your bank be perceived as innovative, but digital wallets, or issuer wallets as they are sometimes called, introduce a solution that is more secure and provides cardholder service choices while reducing your card production costs.

Give your cardholders the option to store a digital image of their cards on their phone and pay directly from their phone wherever contactless payment terminals are available. No need to look for the plastic— the card is stored securely on their mobile device and is available whenever needed.

Seemless integration with Euronet's card management systems, international payment networks, and a trusted partner for the phone SDK, keeps your card "top-of-wallet"" for your cardholders.

Give cardholders a convenient, state-of-the-art option that makes payments simple.
