

Make Modern Payments a Reality

Ren's flexible rules-based fee engine adapts to your unique fee needs.

Financial institutions need the ability to define fee structures that align with their specific business models, including those related to acquirer and issuer transactions, interchange, and revenue-based fees.

Supporting systems should be able to adapt to these needs without necessitating code changes. The Ren Fee Engine allows for the definition of various fee types based on any data element within a transaction, all without requiring modifications at the code level.

Ren Fee Engine

- Highly configurable, rules-based fee engine where authorized users may define new fee rules
- Fee rules are not limited to a pre-defined set of options
- Instead, rules may be based upon any data element associated with a transaction
- Offers a single fee engine for all fees, such as:
 - » Acquirer fees (due to credits)
 - » Issuer fees (due from debits)
 - » Interchange fees
 - » Commissions
 - » Merchant discounts and commissions
 - » Net settlement fees
 - » Define one-time and special fees
 - » Recurring fees (e.g., weekly, monthly, annual, etc.)
 - » Online and batch fees
