Ren

Mobile User Management

Make Modern Payments a Reality

Extend External Mobile Applications

This feature enables enhanced user management for mobile users, allowing support for external mobile applications. It does not include a mobile application.

Complementary Product Feature

The Ren Mobile User Management Feature complements other Ren features, where customers must register their mobile number for services like SMS alerts via the Ren Transaction Engine or linking payment instruments to an alias in the Ren Addressing Service.

Ren Mobile User Management

Supports external mobile applications where Ren offers the following roles:

- Enable mobile registration to define mobile users within Ren
- Assign and manage payment instruments linked to registered mobile users
- Requires separate licensing and services for the Ren Addressing Service to link payment instruments to the mobile user
- Maintenance and management of mobile user registry entries using the Ren Portal user interface
- Enable APIs which may be called by external applications to perform maintenance activities:
- Initiate and finalize mobile user registry maintenance functions
- Submit mobile-initiated transactions through the Ren Submit Transaction API
- Validate mobile user registry during transaction requests
- Retrieve payment instrument(s) linked to the mobile user from the Ren Addressing Service and authorize mobile-initiated transactions
