

Make Modern Payments a Reality

Ren POS Management System drives and manages merchant POS (Point of Sale) terminals for transaction acquiring, routing, authorization, and terminal settlement. Ren POS integrates with the Ren Merchant Management System. Ren POS Management System also provides detailed reporting and analytics, enabling authorized users to monitor system activity.

POS Merchant & Terminal Management for POS Acquirers

- Merchant and terminal onboarding
- Terminal driving
- Transaction acquiring, routing, and authorization
- Terminal settlement – online and batch merchant net settlement options
- Reporting & data analytics

Traditional card-based & cardless transactions, such as digital wallets using wallet ID, proxy, alias, etc.

Traditional & value-added POS Transactions

- Purchase transaction
- Purchase reversal (full and partial)
- Purchase refund (full and partial)
- Purchase and cash back
- Transactions staging via alternative channels such as mobile, Internet, etc.
- 2-factor authentication on select transactions as value-added service (requires separate license & contract):
 - » Consumer requests authorization code >> Ren generates code and sends to mobile user >> Consumer inputs code at POS to authenticate user
- IBAN and BBAN-based transactions
- Cash-based transactions (bill payment (requires separate license & contract), mobile top-up, etc.)
- Coupon and voucher issuance
- Prepaid digital content purchases (requires separate license & contract) such as:
 - » Mobile airtime (online and/or voucher), long distance, subscription services such as TV, Internet, and utilities, digital content such as Apple iTunes and Google Play
