

Make Modern Payments a Reality

Real-time Fraud Monitoring

Real-time fraud detection allows financial institutions to halt fraudulent transactions before they are processed, preventing monetary losses and decreasing chargeback risks. Timely detection conserves funds and safeguards the company's reputation and customer relationships.

Ren Real-time Fraud Interface

The Ren Real-Time Fraud Interface (RFI) connects with external fraud systems to analyze real-time transaction authorization requests and decline any identified potential fraud.

Ren RFI includes existing external fraud system plug-in interfaces for industry-leading fraud & risk solutions developed by industry partners with which financial institutions may contract directly. Additional external fraud system interfaces may be enabled to allow organizations to preserve existing fraud solution investments.

In partnership with external fraud & risk partners, Euronet extends Ren's Real-time Fraud monitoring interface to integrate with the external platforms for end-to-end fraud and anti-money laundering management. The complete solution protects against business fraud, including transactions across all channels, branch office operations, staff operations, retail loss, AML & CTF, Risk Score and Persons Risk Mitigation, Anti-Bribery & Corruption, and more.

This solution provides comprehensive customer-centric security and protection against fraud in the following lines of business:

- Cards and accounts
- Digital Banking (Mobile and Web)
- Payments
- Financing
- Branch Office Operations
- Staff Operations
- Accounting Operations
- Retail Loss
- Shared Intelligence for Fraud Prevention
- Data Quality
