Ren ATM Management
XFS Solution

A comprehensive solution that puts you in command of your fleet!

Ren Designer:
Create and update screen designs. Change backgrounds, update fonts, add images, move the position of text and buttons, change button labels-- all with the ease of drag & drop.

Ren ATM Simulator:
Empower marketing to verify branding and screen changes as well as transaction flows on their desktop prior to formal testing in ATM lab and production deployments.

CREATE
VALIDATE
MONITOR & MANAGE
DELIVER

Ren TMS Dashboard:
Browser-based UI for realtime monitoring and management of single and multi-vendor ATM fleets.

Ren ATM Client:
Replaces hardware vendor driver on the ATM & provides a single software platform for ATM device driving.

No longer be held captive by hardware vendors, waiting for them to enable features your customers desire

Ren ATM Management facilitates transaction acquiring, routing, journaling and reporting. Based on client server architecture, Ren Self-Service is a high availability solution that is compatible with self-service terminals running on the Windows 7 or Windows 10 operating systems.

- Client server architecture
- Vendor agnostic - XFS Standards based
- Hardware agnostic - ATMs, CDMs and Kiosks

- PCI compliant: PA-DSS validated
- Key Block encryption compliant
- Remote Key Management
